

Wagon R Farms Equipment

Combine

- Replaced the water pump & serpentine drive belt fall 2018
- Replaced rotor speed control motor during 2019 harvest
- Replaced alternator with new unit during fall 2023 harvest
- Replaced feeder house drive belt 2023
- Feeder-house calibration completed prior fall 2023 harvest
- Rotor zero calibration completed prior fall 2023 harvest
- Engine oil & filter changed prior to the fall 2023 harvest
- New batteries installed June 2024
- Machine is stored in inside during off season
- All lights, AC, instruments, cameras, sensors, AFS 700, etc. functioned normally when it went into storage after harvest 2023
- Note combine has the optional dual side lights ideal for night work
- In cold weather we never used ether to start. Rather engine block heater was plugged in the night before. Great starting machine.
- Machine is blown out and power washed after harvest and stored in building.
