

**1998 Mustang 2050 Skid Loader**

- 1,945 hours
- 49 hp Yanmar diesel engine
- 1,550 lb load rating
- Enclosed ROPS
- Hand/foot controls
- Auxiliary hydraulics
- General purpose bucket
- Block heater
- Work lights
- New seals and hoses on tilt cylinders
- Recent service – oil change, new hydraulic filters, new air filters, new fuel filter, new lift pump
- New solid tires
- Comes with a set of Traction Tracks OTT tracks that have been fit to the machine along with a tensioning tool for mounting. These tracks add a lot of traction on mud, snow and ice.

Starts, runs and operates just like it should, has been well taken care of and stored inside. Not overworked/abused, used to clean barns and move hay while I've owned it.

Only two known issues - It has a small coolant leak that I was unable to track down and the parking brake has been disabled because it would freeze up in the winter.
