### Gen1 Retail

#### COMPLAINT:

03 MISC REPAIRS

#### CORRECTION:

Had excessive noise when feederhouse was turned on. Removed upper and lower FH drive belts and spun pulleys by hand. Replaced upper belt tensioner pulley and bearings in upper drive pulley for lower FH belt. Replaced lower idler sprocket for FH drive chain. FH latching pins were hard to move and shear bolt was broke. Replaced shear bolt. Removed pins and cleaned debris from pins and holes, it still was hard to move. removed pin end of cable and tried to move it, determined that cable was bad. Replaced cable and adjusted pins. Lateral tilt bolt was broke off on LH side. Drilled bolt and used easy out to remove it. Reassembled with new bolt and bushing. Replaced exhaust blower belt tensioner. LH clean grain bearing was loose in flanges. Replaced bearing and inner flange. Could not get outer flange, and it had no promise date, reused old flange and reassembled. Tightened clamps on hose on inside of LH duals. Rotary screen tensioner (screen side) was stiff and did not pivot easily. Removed it and cleaned rust from pivot bushing. Reassembled and anti seized bushing. Replaced shoe auger drive belt.

#### COMPLAINT:

04 GRAIN TANK WONT UNFOLD

#### CORRECTION:

Grain tank would not unfold without lifting it up. Saw it had an aftermarket bin extension on it. Checked their website and found the installation instructions. It said if this was an issue to add an AXE17977 strut to the extension linkage. Ordered and added strut as per instructions. Tested operation, worked much faster.

### Gen2 Retail

#### CORRECTION:

Noticed that some wiring had been bypassed and went to several connectors. Checked old work orders and found it was to fix a LC2 3509.03 code for sensor supply voltage. Checked wiring harness over carefully and found it was rubbed through above the intermediate chopper pulley. Removed harness from there back to access the bad spot and repaired it. Reinstalled harness. cut out bypass wire. There was not enough wire to splice it back to the original wire at the connectors. Had to put new terminals on and longer pigtails to splice it in. Spliced wiring back to the factory harness at 4 connectors. tested operation.
